Ubiquiti airVision 2 Streamlines IP Video Surveillance

New NVR Appliance, Auto-Discovery and Support for iOS/Android Viewing Ensure Fast, Flexible Deployments

San Jose, Calif.—June 10, 2013—[Ubiquiti Networks](#), Inc. (NASDAQ: UBNT) (“Ubiquiti”) today introduced [airVision 2](#), a complete, integrated and disruptively-priced video surveillance system for up to 50-camera deployments. The [airVision platform](#), which includes re-architected software, [airCam cameras](#), and a new [Network Video Recorder](#) (NVR) appliance, is the perfect solution for hotel chains, restaurants, hospitals, schools, government buildings, retail outlets and other businesses concerned about safety, security and loss prevention.

With airVision 2 comes the new airVision NVR, a compact, low cost network video recorder. The airVision NVR stores up to 1,200 hours of video at 480p resolution or 400 hours of video at 720p HD resolution on the built-in 500GB hard drive. When combined with airCams and the included airVision video management software, a complete, enterprise-class video surveillance system can be deployed in a matter of minutes. For deployments with larger storage requirements, users can use the airVision NVR software on their own servers. The airVision NVR MSRP is \$330 and is available immediately. Existing users can download it for free at <http://www.ubnt.com/download#AirCam>

The new airVision 2 video management software combines an intuitive user interface with advanced features. Re-architected from the ground up, the airVision software now includes auto-discovery of airCams, camera-based motion detection, user-level security, storage management, H.264 video, reporting and mobile device support. This software is bundled with airCam and airVision NVR hardware, so there are no additional license costs or subscription fees.

“The traditional multi-vendor, pick-and-choose video surveillance market is needlessly complex and inefficient for most users,” said Robert J. Pera, CEO of Ubiquiti Networks. “Ubiquiti is streamlining the deployment of IP video surveillance by providing advanced capabilities in a fully integrated, disruptively-priced system.”

airVision 2 software features include:

- Mobile support on iOS and Android:
Web interface accessible on iOS and Android tablets and phones
- Rapid, easy deployment via auto-discovery:
airVision software now discovers, configures and manages all airCams centrally
- User-level, role-based security:
Detailed control over access rights for organizations with multiple users
- Improved performance and scalability with H.264 video:

Uses H.264 video for more crisp video and better storage utilization

Other major software enhancements include:

- Camera-based motion detection for improved performance
- Playlists for configurable live views
- Automatic, rule-based storage management for managing disk usage efficiently

About Ubiquiti Networks

Ubiquiti Networks (NASDAQ: UBNT) is closing the digital divide by building network communication platforms for everyone, everywhere. With over 10 million devices deployed in more than 200 countries, Ubiquiti is transforming under-networked businesses and communities. Our leading edge platforms airMAX™, UniFi™, airFiber™, airVision™, mFi™ and EdgeMAX™ combine innovative technology, disruptive price performance and the support of a global user community to eliminate barriers to connectivity.
